

For Immediate Release

Camson Bio Technologies Approaches High Court To Finalize Demerger Of Seed Business

Mumbai, 12th March 2015: - Camson Bio Technologies Ltd. (CBTL) has filed the application for Scheme of Arrangement (Demerger) of seeds business to Camson Seeds Limited with the Honourable High Court of Karnataka. The company has already received the observation letter from SEBI and BSE in this regard. The final approval from High Court will see the formal launch of a separate business entity.

The promising agri biotech business has grown at a robust pace over the past few years and has now assumed sufficient size and scale. An improved focus will help it grow further and scale new boundaries. This will help to reach out to every farmer across the globe and share Camson's message of Zero Residue[®] Agriculture.

Also, fundamentally most dynamics like risk, capital requirements & return ratios of both businesses have begun to differ. This necessitated the need for the demerger.

The shareholding pattern of Camson Seeds Ltd. will mirror the shareholding pattern of CBTL. Shares will be allotted in the ratio of 1:1 i.e. existing shareholders of CBTL will get one equity share of Camson Seeds Limited for every share held in CBTL. While as a business, CBTL will remain committed to provide farmers across the globe with highly productive, Zero Residue[®], eco-friendly agri-inputs, the resultant company (Camson Seeds) will carry forward Camson's glorious tradition of producing high yielding & drought resistant hybrid seeds.

Mr. Santosh Nair, CEO at Camson said "This is part of Camson's efforts to unlock and improve shareholder value, in keeping with its track record for conducting path-breaking research and launching innovation driven products. The demerger is designed to ensure improved focus to the rapidly growing agri-biotech business while simultaneously providing shareholders direct participation in the seeds business. We await approval from the High Court for the same."

+++

About Camson Biotech- Established in 1993, Camson Bio Technologies combines the latest knowledge in breeding, molecular genetics and metagenomics in agriculture with the latest practices in environmental safety and protection, to market a wide range of products spanning

hybrid seeds, bio-fertilizers and biocides. These are non-poisonous, eco-friendly and residue-free. Headquartered in Bangalore, Camson Bio Technologies employs the best talent in the industry to bring innovative biotechnology products to the farmers. Partnering with farming communities, government agencies and corporate houses in India, Camson Bio Technologies aims at empowering farming communities by focussing its R&D to their needs.
